Dear Rang Technologies Recruiting,

If solving problems is wrong, I don't want to be right! My name is Shivam Agrawal and I am studying computer science with a focus on data science at the University of Maryland, College Park. I have a passion for solving problems: math problems, computer science problems, business problems, anything! I am curious about the problems that Rang Technologies is trying to solve and would like to join the team as a data science intern!

My experience using open source technologies such as Python, Tensorflow, and Scikit-Learn to conduct research, compete on Kaggle, and improve university services such as our student newspaper have helped me gain unique insight into solving problems using data science!

I believe in the Rang Technologies mission: bringing data to decisions. All too often, I see companies making decisions without understanding trends and realizing the market of their product, both of which can be comprehended with data. Joining the Rang Technologies team, I know that I will be making a difference for many companies, helping them to find unique insights and implement the correct strategies.

I am in the East Brunswick area and would be able to commute to the office every day without any issue! Please let me know if you have any questions!

Thank you,

Shivam Agrawal
